TROPES AND FIGURES IN ANGLO-SAXON PROSE.

A precise knowledge of the tropes and figures, found in the literature of any given period, is necessary to a just appreciation of an author's style and of the literary development of his time. The subject may be investigated simply from the point of view of tropes and figures as instruments of literary expression, quite independently of the author or the period; or as a means by which, on the one hand, the author makes his thought forcible or beautiful, and by which, on the other, the national trend of thought is indicated,—as, here, the peculiar product of the individual, and, there, the common property of the period.

The ancient rhetoricians treated the subject in its relation to the whole body of classical writings without any special reference to individual authors. They regarded it as a branch of Rhetoric, not as a basis for the determination of the author's literary art. Gerber's work¹ is the best modern treatise in the classical method. In it, no investigation is attempted of the styles of the various authors; citations are made from several languages simply as illustrations of tropes and figures.

The numerous monographs which deal with this subject in the classical authors are written mostly from the point of view of individual characteristics of thought and style, and have thereby rendered valuable service to the higher criticism of the texts. The figures of speech and the texts are, necessarily, limited for each monograph.

In Anglo-Saxon only certain figures of speech have been considered, and these only as they occur in poetry. Professor

¹ Gustav Gerber: *Die Sprache als Kunst*; Berlin, 1885. 2 vols.

Heinzel's essay¹ on the style of old Germanic poetry called forth Professor Gummere's dissertation² on the Anglo-Saxon Metaphor. Prof. Heinzel attempts to show that certain devices were common to all Germanic literature. Such are the epithet, used for the more ordinary pronoun, appositions intended as ornament or explanation, separated from the words to which they refer, the pronoun preceding its noun, variation by means of repetition and parallelism, and the changed succession of words. Then of tropes he finds similes, kennings, and "sensual expressions." The theory advanced by Heinzel to account for the lack of the simile in A. S. as a loss from the primitive Germanic, due to the influence of Romanism and Christianity, is met by Prof. Gummere's theory that the Norse developed the simile of itself, and that the simile did not belong to the parent Germanic stock. The passionate nature of the Germanic race is opposed to the use and development of the simile.

Prof. Gummere then proceeds to an examination of the metaphor in A. S. poetry, and groups his examples in the relations of the concrete and the abstract. As the result of his investigations, he comes to the following conclusion:³ "The typical A. S. metaphor was originally confined to one word, or, at the farthest, to several words that stood in the closest syntactical relation. This general type has been invaded by the influence of the Latin literature of the Church, especially by the hymns; the result, whether as extended metaphor, simile, or learned allegory, is found not so much in *Beowulf* as in the *Caedmon* poems, but even there to no overwhelming extent."

Dr. W. Bode⁴ has treated the kenning in detail, and has grouped his full lists of examples in relation to their signification, not as characterizing separate works.

The object of this monograph is to treat with special care the homilies of *Ælfric*, *Wulfstan*, and the *Blickling Collection*, and

the translation of the *Consolation of Philosophy* of Boethius, in relation to certain tropes and figures; to show to what extent the original prose of Anglo-Saxon possesses these rhetorical devices, wherein the translation differs from its original, and in what degree the several writers differ from one another; to discover from what spheres of life the tropes are taken, and to judge from that of the intellectual attainments of their authors; to find out, where possible, what figurative ideas are original, and what borrowed; to contrast, where pertinent, the characteristics of prose and poetry in this respect; to establish the degree of excellence which these writers attained in the employment of their instrument, with special reference to the word-figures; and, finally, to form a general estimate of the literary value of these tropes and figures in the monuments considered.

CLASSIFICATION.

Gerber¹ gives the following divisions of Tropes and Figures:—

(1) Picture-figures (*Bildfiguren*), or æsthetic figures, usually called Tropes;

(2) Phonetic or Sound-figures;

(3) Figures of thought or sense (*noetische oder Sinn Figuren*).

This treatise will deal mainly with the two first divisions, and will include only certain leading figures in these divisions.

The distinction between a trope and a figure has been repeatedly pointed out. Professor H. E. Greene² thus renders the definitions of Quintilian, which bring out the distinction as well as anything since written: "A trope is the turning of a word or phrase from its literal signification to another; while 'a figure, as is indicated by its very name,—*figura*,—is a form of speech differing from the common and ordinary mode of expression.'³ A trope gives a word a new meaning; while a figure is simply a matter of the order of words."

I. TROPES: 1. METAPHOR.

The *Century Dictionary* defines Metaphor as "a figure of speech from which, by some supposed resemblance or analogy, a name, an attribute, or an action, belonging to or characteristic of one object, is assigned to another to which it is not literally applicable; the figurative transfer of a descriptive or affirmative word or phrase from one thing to another; implied comparison by transfer of terms."

In the following lists of metaphors, no special classification is adopted. It is almost impossible to find a system of grouping which is thoroughly satisfactory, and, rather than adopt one that would lead to confusion, or one that would obscure the literary value of the trope, I have arranged them according to their sequence in the texts, and grouped only those of close resemblance in form and meaning.

picturesqueness of the A. S., when compared with the Latin—*ilico miserum exsulemque cognovi* (I v. 3); the same idea occurs in 8. 32,—*ic wiste ðæt ðu utafaren wære, ac ic nyste hu feor etc.*—to which corresponds the Latin—*sed quam id longinquam esset exilium . . . nesciebam* (I v. 4). 12. 31, *nu ic habbe ongiten ðine ormodnesse . . . ac ic wat hu ðin man getilian sceal*,—the Latin has—*Iam scio . . . morbi tui . . . causam; quid ipse sis, nosse desisti, quare plenissime vel ægritudinis tuæ rationem vel aditum reconciliandæ sospitatis inveni* (I vi. 36). 12. 33, *ðu rædest ðæt ðu wrecca wære and bereafod ælces godes*,—the Latin, *exsulem te et expoliatum propriis bonis esse doluisti* (I vi. 40). 14. 9, *we habbað nu geot ðone to mæstan dæl ðære tyndran ðinre hæle*,—the Latin is the same,—*habemus maximum tuæ fomitem salutis veram de mundi gubernatione sententiam* (I vi. 48). 14. 12, *forðam ðe of ðam lytlan spearcan ðe ðu mid ðære tyndran gefenge lifes leoht ðê onlihte*,—*jam tibi ex hac minima scintillula vitalis color inluxerit* (I vi. 51). 14. 17, *of ðæm ðonne onginnað weaxan ða mistas ðe ðæt Mod gedrefað and mid ealle fordwilmað ða soðan gesiehte swelce mistas swelce nu on ðinum Mode sindan*—*ex quibus orta perturbationum caligo verum illum confundit intuitum* (I vi. 55). 14. 19, *ac ic hie sceal ærest geðinnian, ðæt ic siððan ðy eð mæge ðæt soðe leoht on ðê gebringan*,—to which corresponds—*hanc paulisper lenibus mediocribusque fomentis attenuare temptabo, ut dimotis fallacium affectionum tenebris splendorem veræ lucis possis agnoscere* (I vi. 56). The original is more affective than the translation.

14. 30, *swa doð nu ða ðeostro ðinre gedrefednesse wiðstandan minum leohtum larum*,—suggested by the Latin—*Nubibus atris condita nullum Fundere possunt Sidera lumen* (I vii. 1). 14. 31, *ac gif ðu wilnige on rihtum geleafan ðæt soðe leoht oncnawan, etc.* The Latin contains the same trope—*Tu quoque si vis Lumine claro Cernere verum, etc.* (I vii. 20). 16. 1, *ðæt Mod siemle bið gebunden mid gedrefednesse ðær ðissa twega yfela anðer ricsað*,—so in the Latin—*Nubila mens est Vincetaque frenis, Hæc ubi regnant* (I vii. 29). 16. 9, *ic ongite genoh sweotule ðæt ða woruld sælða mid swiðe manigre swetnesse swiðe lytelice oleccað ðæm Modum ðe hi on last willað swiðost beswican*,—this may also be considered as an example of Personification; the Latin is—*Intelligo*

multiformes illius prodigii fucos et eo usque cum his quos eludere nititur blandissimam familiaritatem, dum intolerabili dolore confundat quos insperata reliquerit (II i. 6). 18. 2, nu ðu hæfst ongiten ða wonclan truwa ðæs blindan lustes,—the Latin has a more vivid trope—deprehendisti Cæci numinis ambiguos vultus (II i. 31). 18. 6, gif ðu ðonne heora ðegen [i. e. of worldly goods] beon wilt; so 20. 33, mine ðeowas sindon Wisdomas and Cræftas and soðe welan. 22. 31, ne bið se ðurst gefylled heora gitsunga ac seo grundlease swelgend hæfð swiðe manegu westu holu on to gadrianne,—Sed quæsitæ vorans sæva rapacitas Alios pandit hiatus (II ii. 13). 30. 5, ðin ancor is git on eorðan fæst,—quando tenaces hærent ancoræ (II iv. 29); so 30. 10, eala wæran ða ancras swa trume and swa ðurhwuniende ge for Gode ge for worulde,—the Latin is—et hæreatet inquam precor (II iv. 31); so 30. 13, eall hie us ðyncað ðy leohtran ða hwile ðe ða ancras fæste beoð.

32. 34, mid swiðe mænige bitnesse is gemenged seo swetnes ðisse worulde, so the original—Quam multis amaritudinibus humanæ felicitatis dulcedo respersa est (II iv. 61). 32. 35, ðeah heo hwam wynsum ðynce, ne mæg he hie ne habban gif heo hine fleon onginð,—the original is less vivid in the use of 'abeat' which the A. S. translator renders by the more concrete 'fleon'—tamen quominus cum velit abeat, retinere non possit (II iv. 63). 34. 2, ne hie [wealth] ðam geðyldegum . . . simble ne wuniað,—the metaphor is not the same in the Latin, but the personification exists in both—nec apud æquanimos perpetua pendurat nec anxios tota delectat (II iv. 66). 34. 7, se hrof is eallra gesælða,—to which the Latin corresponds, but with a different metaphor—summa cardinem felicitatis (II iv. 69). Further instances of this metaphor, with the Latin correspondent, are as follows: 60. 22, beoð to ðam hrofe ðonne git cumen fulfremedra mægena,—ad extremam manum virtutum perfectione perductas (II vii. 6),—the different metaphor is to be noticed. 80. 13, ðæt is hrof eallra oðerra goda; the Latin is not metaphorical—omnium summum bonorum (III ii. 7). 80. 19, hit is ægðer ge hrof ge flor ealles godes,—not a direct translation of the Latin,—bonorum omnium congregatione (III ii. 11)—but suggested, apart from the peculiar A. S. trope, by the meaning. 136. 10, he is fruma and æwelm and hrof eallra goda,—the metaphor is not in the Latin, the corresponding language being quite

literal. 142. 30, *ðæt hehste god is hrof eallra oðra goda*, so 142. 34, *ðæt hehste god sie ðe (se) hehsta hrof eallra goda and seo hior ðe eall god on hwearfað*,—the Latin has only the metaphor of the ‘hinge’—*Quo fit, uti summa, cardo atque causa expetendorum omnium bonitas esse jure credatur* (III x. 121). 154. 8, *he sie se hehsta hrof eallra Goda*,—to which—*erit omnium summum bonorum* (III x. 110). 180. 12, *irnað hider and ðider dwoligende under ðam hrofe eallra gesceafta*,—the Latin here is closer to the A. S. than any previous example under this head—*circa ipsam rerum summam virticemque deficiunt* (IV ii. 78). 180. 17, *to ðam hehstan hrofe eallra gesceafta ðæt is God*; 184. 13, *he is ælces godes ægðer ge hrof ge flor*; 224. 26, *to ðæm hean hrofe eallra goda*,—note the different metaphor in the Latin—*de summi boni cardine* (IV vi. 95). 226. 22, *he of ðæm hean hrofe hit eall gesihð*,—which is very close to the Latin—*qui cum ex alta providentiæ specula respexit* (IV vi. 115). 254. 16, *wið ðæs hean hrofes ðæs hehstan andgites*,—corresponding to the Latin—*in illius summæ intellegentiæ cacumen* (V v. 49),—the translation in this case is more exact.

36. 18, *ðonne hit se wind strongra geswinca astyroð, oððe se ren ungemetlices ymbhogan*; 36. 20, *he sceal fleon ðone frecnan wlite ðises middangeardes and timbrian ðæt hus Modes on ðam fæstan stane eaðmetta*,—to which—*Fugiens periculosam Sortem sedis amœnæ Humili domum memento Certus figere saxo* (II iv. 13); 36. 22, *Crist eardað on ðære dene eadmodnesse*,—the idea was probably suggested by the Latin—*Tu conditus quieti Felix robore valli* (II iv. 19). 36. 28, *ðeah ðe se wind ðara earfoða and seo singale gemen ðissa woruldselða him onblawe*,—this is suggested by the Latin—*Quamvis tonet ruinis Miscens æquora ventus, . . . Duces serenæ ævum Ridens ætheris iras* (II iv. 21), but fails to be as vivid and effective as the original. In the ‘metre’ from which these four examples are taken, it is to be noted that the language of the Latin is not metaphorical.

38. 21, *his heortan diegelnesse hit geopenað and ðæs oðres heortan belocene hit ðurhfærð*; 54. 20, *him geðafiað ðæt hi bioð heora [wealth] hlafordas*; 56. 18, *ac hine gebindað ða won wilnunga mid heora unabindendlicum racentum*,—corresponding exactly to the Latin—*quem vitiosæ libidines insolubilibus adstrictum retinent*

catenis (II v. 56). 68. 15, of ðam carcerne ðæs lichoman,—to which—mens conscia terreno carcere soluta. 68. 26, hwi ge wilnigen ðæt ge underlutan mid eowrum swiran ðæt deaðlicne geoc,—to which—colla mortali jugo Frustra levare gestiunt (II vii. 7). 70. 18, se æfterra deað gegripð and on ecesse gehæft,—Cum sera vobis rapiet hoc etiam dies, Iam vos secunda mors manet (II vii. 25). 74. 5, se anwealda hæfð ealle his gesceafta swa mid his bridle befangene and getogene and gemanode swa ðæt hi nauðer ne gestillan ne moton, ne eac swiðor styrian ðonne he him ðæt gerum his wealdleðeres toforlæt,—this metaphor is contained later on in the Latin, and is translated thus—74. 31, ac ðonne ær ðe he ðæt gewealdleðer forlæt ðara bridla, ðe he ða gesceafta nu mid gebridlode hæfð, &c.; the original is—Hic si frena remiserit, &c. (II viii. 16). 74. 25, se ilca forwyrnð ðæræ sæ ðæt heo ne mot ðone ðeorsewold oferstæppan ðæres eorðan,—notice the fine metaphor in ‘ðeorsewold ðære eorðan,’ which is not contained in the original—Ut fluctus avidum mare Certo fine cœrceat Ne terris liceat vagis Latos tendere terminos (II viii. 9).

76. 6, ða hæfde he me gebunden mid ðære wynnsunnesse his sanges,—the trope is slightly different in the Latin—cum me audiendi avidum stupentemque arrectis adhuc auribus carminis mulcedo defixerat. 76. 17, ymbe ðone læcedom ðara ðinra lara hwene mare gehyran,—the Latin has merely—remedia . . . audiendi avidus (III i. 7). 76. 28, hwile se læcecræft is minre lare . . . se is swiðe biter on muðe and he ðe tirð on ða ðrotan ðonne ðu his ærest fandast. Ac he werodað syððan he innað and bið swiðe liðe on ðam innoðe and swiðe swete to bealcetenne,—the Latin more condensed is—ut degustata quidem mordeant, interius autem recepta dulcescant. 78. 33, gif ðu ærest awyrtwalest of ðinum mode ða leasan gesælða and hi ofatihst of ðone grund,—the trope of the Latin is quite different—Tu quoque falsa tuens bona prius Incipe colla jugo retrahere (III i. 11). 84. 33, hit [Mod] bið mid ðam hwilum oferdrenced,—a continuation of the trope in the simile of the preceding context, translated from the Latin (III ii. 51). 88. 3, mid ðam bridlum his anwealdes,—Quantas rerum flectat habenas Natura potens (III ii. 1). 88. 5, he hi hæfð geheaðorade and gehæfte mid his unanbindendlicum racentum,—to which the Latin corresponds in sense—Stringatque ligans inreso-

luto Singula nexu (III ii. 4). 94. 22, hwæðer nu se anweald hæbbe ðone ðeaw ðæt he astificige unðeawas and awyrtwalige of ricra manna mode and plantige ðær cræftas on,—ut utentium mentibus virtutes inserant vitia depellant (III iv. 3); the metaphor of the Latin just quoted is continued in 94. 24, se eorðlica anweald næfre ne sæwð ða cræftas ac lisð and gadrað unðeawas, and ðonne hi gegadrad hæfð, ðonne eowað he hi nalles ne hilð. 118. 33, ða sceadra ðære soðan gesælðe,—from which the Latin slightly differs—formam felicitatis (III viii. 1). 132. 29, ofenum eagum ures Modes we moten geseon ðone æðelan æwelme ealra goda,—of which only the latter trope is in the Latin—Da fontem lustrare boni (III ix. 23). 132. 31, Forgif us ðonne hale eagan ures Modes ðæt we hi ðonne moton afæstnian on ðê,—to which—da luce reperta In te conspicuos animi defigere visus (III ix. 23). 132. 32, todrif ðone mist ðe nu hangað beforan ures Modes eagum,—Dissice terrenæ nebulas et pondera molis (III ix. 25). 132. 33, onliht ða eagan mid ðinum leohte, forðam ðu eart sio birhtu ðæs soðan leohtes,—which is an expansion of the Latin—tuo splendore mica (III ix. 25).

132. 34, ðu eart seo sefte ræst soðfæstra,—corresponding exactly to the Latin—Tu requies tranquilla piis (III ix. 26). 132. 37, ðu eart ægðer ge weg ge ladðeow geo sio stop ðe se weg to ligð,—to which the Latin—te cernere finis Principium vector dux semita terminus idem (III ix. 27). 140. 2, is an God se is stemn and staðol ealra goda. 144. 27, ðæt is sio an ræst eallra urra geswinca, sio an hyð byð simle smyltu æfter eallum ðam ystum and ðam yðum urra geswinca,—to which the original—Hæc erit vobis requies laborum, Hic portus placida manens quiete Hoc patens unum miseris asylum (III x. 4). 144. 24, seðe nu gehæft sie mid ðære unnyttan lufe ðisse middangeardes, sece him freedom hu he mæge becoman to ðam gesælðum,—the Latin is more ornate in its metaphor—Quos ligat fallax roseis catenis Terrenas habitans libido mentes (III x. 2). 144. 29, ðæt is seo an friðstow and sio an frofer erminga æfter ðam ermðum ðisses andweardan lifes,—note the literal and metaphorical expressions in the same sentence; only the latter exists in the Latin—Hoc patens unum miseris asylum (III x. 6). 144. 32, ne onlihtað hi nauht ðæs modes eagan, ne heora sccarpnesse nauht gebetað to ðære sceawunge ðære soðan gesælðe, ac get swiðor he ablendað ðæs modes eagan,—correspond-

ing to the terser Latin—*Inlustrant aciem magisque cæcos* *In suas condunt animos tenebras* (III x. 11). 146. 2, *mid hluttrum eagum* his modes,—this expression which occurs frequently in the A. S. is generally not found in the Latin. 156. 1, *mid ðam gedwolmiste* his fortio *ðæt hit ne mæg swa beorhte scinan swa hit wolde*,—the Latin is more vivid—*quod atra textit erroris nubes* (III xi. 7). 156. 2, *bið simle corn ðære soðfæstnesse sæd on ðære sawle wuni-gende*,—to which—*Hæret profecto semen introrsum veri* (III xi. 11). 158. 1, *gif he hi ne bunde mid his unabindendlicum racentum*,—a frequent expression in A. S. 158. 9, *ðu eart nu fulneah cumen innon ða ceastre ðære soðan gesælðe*,—the Latin is somewhat different, and may have been misunderstood by the A. S. translator—*ut felicitatis compos patriam sospes revisas* (III xii. 26). 158. 27, *ic hæbbe funden duru ðær ðær ic ær gescat ane lytle cynan swa ðæt ic ungeaðe mihte geseon swiðe lytellne seiman leohtes of ðisum ðeostrum*,—not in the original. 164. 2, *ðæt ðær aspringe sum spearca up soðfæstnesse*,—to which the Latin—*veritatis scintilla dissiliat* (III xii. 68). 164. 13, *lætst me hider and ðider on swa ðicne wudu ðæt ic ne mæg ut aredian*,—the Latin has a slightly different metaphor—*Ludisne . . . me inextricabilem labyrinthum rationibus texens* (III xii. 77). 160. 14, *God æghwær wealt mid ðam helman and mid ðam stiorroðre* his godnesse,—corresponding to the Latin—*omnia bonitatis clavo gubernare jure credatur* (III xii. 45), so 164. 27,—corresponding to (III xii. 88). 166. 25, *ðe mæg geseon ðone hluttran æwellm ðæs hehstan godes and of him selfum aweorpan mæg ða ðiostro his Modes*,—only the first metaphor is found in the Latin—*Felix qui potuit boni Fontem visere lucidum* (III xii. 1).

170. 16, *helle ðiostra to flionne and to ðæs soðes godes lichte to cumenne*,—not corresponding to the Latin—*Quicumque in superum diem Mentem ducere quæritis* (III xii. 53). 170. 28, *ðu [Wisdom] eart Boda and forrynel ðæs soðan leohtes*,—the Latin has merely—*veri prævia luminis* (IV i. 5). 172. 31, *ic sceal ærest ðin mod gefiðerian, ðæt hit mæge hit ðy eð up ahebban ær ðon hit fleogan onginne on ða heahnesse, &c.*,—so the Latin—*pinnas etiam tuæ menti quibus se in altum tollere possit adfigam* (IV i. 33). 174. 1, *sitte him on minum hrædwæne, ðocrige him on minne weg, ic beo his latðiow*,—to which—*ut perturbatione*

depulsa sospes in patriam meo ductu mea semita meis etiam vehiculis revertaris (IV i. 35). 174. 6, ic nu moste ðin Mod gefiðerigan mid ðam fiðerum,—to which—Quas [pinnas] sibi cum velox mens induit (IV i. 3). 174. 18, se gemetgað ðone bridel and ðæt wealdleðer ealles ymbliweorfes heofenes and eorðan,—corresponding to the briefer Latin—orbis que habenas temperat (IV i. 20). 174. 20, se stiorð ðam hrædwæne eallra gesceafta,—so the Latin—volucrum currum stabilis regit (IV i. 21). 174. 26, ða unrihtwisan cyninga and ealle ða ofermodan rican bion swiðe unmihtige and swiðe earne wreccan,—note the brevity and terseness of the Latin—cernes tyrannos exules (IV i. 30). 180. 5, mid hu hefigne racentum dysiges and ungesælða hi sint gebundene. 180. 33, swongornes hi ofsit and hi mid slæwðe ofercymð and gitsung hi ablent,—notice the personification. This does not correspond to the Latin; ‘ablent’ is suggested probably by ‘ignorantiæ cæcitate’ (IV ii. 89). 186. 20, ðonne wynð ðæt Mod beswungen mid ðam welme ðære hatheortnesse,—notice the mixed metaphor. The translation is a very free one of the Latin—Hinc flagellat ira mentem fluctus turbida tollens (IV ii. 7). 188. 1, on hu ðiostrum horoseaðe ðara unðeawa ða yfelwillendan sticiað,—note the force of the A. S. metaphor, more expressive than the abstract idea of the Latin—quanto in cæno probra volvantur (IV iii. 1). 188. 21, se beah godes edleanes,—corresponding to the Latin—sapienti tamen corona non decideret (IV iii. 14). 206. 1, swa bioð ða synfallan Mod ablend mid heora yfelan willan, ðæt hi ne magon gesion ðæt lioht ðære beorhtan soðfæstnesse,—to which the Latin—nequeunt enim oculos tenebris assuetos ad lucem perspicuæ veritatis adtollere (IV iv. 89).

206. 6, ða ablendan mod,—and similarly 206. 20, ðæt ælc mon sie ablend swa hi sint,—and 206. 26, ðæs Modes eagan weorðan swa ablende. 210. 3, ðæt mon ðær mæge sniðan and bænnan his unðeawas,—for which the Latin supplies the idea of pruning—ut culpæ morbos supplicis resecarent (IV iv. 129). 210. 9, ænigne spearcan wisdomes hæfdon,—which translates the Latin—si eis aliqua rimula virtutem relictam fas esset aspicere (IV iv. 133). 210. 27, gebidan gecyndelices deaðes, nu he eow ælce dæg towearðes onet,—note the personification, contained more vividly in the Latin—si mortem petitis, propinquat ipsa Sponte sua

volucres nec remoratur equos (IV iv. 3); so also 210. 28, hwi ne magon ge gesion ðæt he spyrað . . . æfter monnum and ne forlæt nan swæð ær he gefehð ðæt ðæt he æfter syreð. 218. 18, ac God wunað simle on ðære hean ceastre his anfealdnesse and bile-witnesse,—the Latin, referring to the mind of God, has—*Hæc in suæ simplicitatis arce composita* (IV vi. 24). 226. 18, hwæt is sawla hælo bute rihtwisnes; oððe hwæt is hiora untrumnes bute unðeawas. Hwa is ðonne betera læce ðære sawle ðonne . . . God,—to which the Latin—*Quid vero aliud animorum salus videtur esse quam probitas? quid ægritudo quam vitia? quis autem alius vel servator bonorum vel malorum depulsor quam rector ac medicator mentium deus?* (IV vi. 112); so 230. 17, ac se goda læce, ðæt is God, lacnað hiora Mod mid ðam welan,—the Latin does not mention God—*hujus morbo providentia collatæ pecuniæ remedio medetur* (IV vi. 163). 232. 21, hit [song] is se læcedom and se drenc, ðe ðu lange wilnodest,—the Latin has only—*haustum quo refectus firmior in ulteriora contendas* (IV vi. 199). 234. 22, ðanon he welt ðam gewealdleðerum ealle gesceaftu,—so the Latin—*Rerumque regens flectit habenas* (IV vi. 35). 240. 18, hit is swa fyrrn of uncrum wege, of ðam wege ðe wit getiohhod habbað on to farenne,—to which the Latin—*hæc autem etsi perutilia cognitu tamen a propositi nostri tramite paulisper aversa sunt verendumque est, ne deviis fatigatus ad emetiendum rectum iter sufficere non possis* (V i. 9). 246. 23, wadað on hiora agenre willan and æfter hiora lichoman luste irnað. 254. 17, ðæt ðu mæge . . . cumon . . . to ðinre agenre cyððe ðonne ðu ær come,—transferred to a spiritual sense. 256. 12, habban ær ðines modes eagan clæne and hluttre.

The metaphor of Anglo-Saxon poetry is bolder and more spontaneous than that of the prose. Poetry itself had reached a stage of development never attained by prose, and it is only natural that such rhetorical features as the tropes should be more effectively employed in an advanced poetry than in an incipient prose. Further, from the very subject of this prose, there was not such a demand for figurative speech. The prose, for the most part, was written with a didactic purpose. The style must necessarily be simple. Only such metaphorical language may be used as will

be readily understood by the masses. When the homilist uses a metaphor which may be obscure, he often interprets it, with the result, however, that, while he makes its meaning unmistakable, he often robs it of all its force. The imaginative metaphors of poetry would tend to obscure the preacher's message. Consequently, all his metaphors are simple and direct, and are for the most part taken from the most familiar experiences of life, whether they come from literature or the casual observation of daily phenomena. Originality is not one of the features of this metaphor. The Scriptures and the Church Fathers used the simplest tropes forcibly to express their thoughts, and the A. S. homilist, satisfied with their fitness for his purpose, adopted them with only such change as rendered them more intelligible to his audience.

Considerable literary skill was frequently shown in the adaptation of these tropes to Anglo-Saxon conditions. For instance, Christ is spoken of in the New Testament as the light of the world; Ælfric, with his A. S. horror of darkness, treats the metaphor as follows: "Crist is se soða dæg, seðe todræfde mid his tocyme ealle nytennyse ðære ealdan nihte, and ealne middangeard mid his gife onlihte."¹ All metaphors relating to war, the sea, the feast, etc., would be easily adopted by the homilist, and would readily appeal to the instincts of the people. Thus, "mid deofles flan ðurhscotene,"² compares not unfavourably with the Biblical "fiery darts of the wicked."³ So the relation of master and servant is well employed in "ne bið he ðæra æhta *hlaford*, ðonne he hi dælan ne mæg; ac he bið ðæra æhta *ðeowa*, ðonne he him eallunga ðeowað."⁴ The intense A. S. dread of banishment adds great force to the metaphor,—“we ealle sind *cuman* on ðisum life, and *ure eard* nis na her; ac we sind her swilce wegferende men.”⁵ The Biblical “rooted and grounded in love”⁶ apparently suggests the metaphor of “heora heortan wyrtruman on his lufes aplantodon.”⁷ Wulfstan shows considerable vigour in “ðæt deofol ne mæg ænig his ættrenra wæpna him on afæstnjan”⁸ and in “flyhð se frofur aweg,”⁹ but his metaphors are comparatively few.

His rhetorical devices are confined for the most part to the figures of euphony. Ælfric varies in his use of the metaphor; in the first part of the first volume there are a large number, but in the remaining homilies they are less frequent. The same is true of the Blickling Homilies; the first ten homilies have many more than the rest of the collection.

The point of view from which the metaphor of the Boethius is treated must necessarily be different from that of the homiletic metaphor. While the homilists were more or less influenced by ecclesiastical literature, their work was, in a way, original; but in the present instance we have to deal with a direct translation. The translation is by no means exact. Alfred, the reputed translator, in his preface (viii. 2), says: "Sometimes he set word by word, sometimes meaning of meaning, as he most plainly and clearly could explain it for the various and manifold worldly occupations which often busied him both in mind and body."

An examination into the originality of the metaphors of the Boethius gives the following results. Of the 130 metaphors quoted above, 70 are more or less literal translations of the original, which preserve the metaphorical idea intact. That only about half the metaphors of a translation should belong to the original shows the great freedom which the translator exercised. Of those remaining, 35 have no exact correspondents in the Latin; there are nine cases in which there is a change in the metaphorical idea from the original to the translation, eleven cases in which the trope is suggested by the immediate context of the Latin, and five cases where literal statement is translated by figurative.

If we examine the original metaphors of this translation, we shall find that they show a decided superiority to the average metaphor of the homilies. Not that the figurative ideas are more striking or original than such as we find in all the homilies, but the general average is higher. What occurs only in isolated instances in the homilies is the norm in the Boethius. The ideas are such as are easily suggested by the environments of the writer and do not in themselves indicate any especial keenness of observation. The merit of these metaphors consists in their variety and their appropriateness to the context. A new vigour is given the exhausted trope by the terseness and not unfrequent brevity of the

expression. The allegorical interpretation is not so frequent nor so elaborate.

The metaphors which are classed as translations are not, by any means, literal. The translator always felt at liberty to treat the Latin as he chose, and when, in the 70 cases mentioned, he adopted the figurative idea of the original, he gave it what expression he pleased. Sometimes he surpasses the Latin, at other times he does not.

The instances of the substitution of a metaphorical for a literal statement are rare, and are such as, to the A. S. mind, have almost lost their colour; thus 'hrof' for 'summum,' 'fleon' for 'abeat,' etc.

The cases where a change of the figurative idea occurs are due often to a desire on the part of the translator to avoid any obscurity of reference in the Latin. Thus the Latin *Sirenes*, a metaphorical expression for temptations and cares, is translated by the less vivid A. S. *sceaðan*,¹ because *Sirenes* would suggest nothing to the Anglo-Saxon mind; in 164. 13, *ðiene wudu* occurs for *inextricabilem labyrinthum*, a translation that retains all the force of the original and presents no possible obscurity.

The remaining metaphors are those suggested by the context of the originals. The same trope will occur sometimes in two places in the Anglo-Saxon, where there is only one in the Latin; or a trope, not translated in its original context, is used elsewhere. Again, as in 180. 33, *gitsung hi ablent*, where the metaphor is evidently suggested by the Latin *ignorantiæ cæcitate*, the Anglo-Saxon is not a translation, but is suggested from the immediate context of the Latin.

If we look through the lists collected by Professor Gummere, we shall learn the essential character of the metaphor of poetry. The following illustrations will, perhaps, suffice for illustration:—D. 442, *healne hrof heofona rices*, 'the sky'; E. 287, *famge feldas*, 'the sea'; B. 1143, *hildeleoman . . . on bearm dyde*, 'thrust a sword into his breast'; B. 1032, *fela lafe*, 'the swords,'—*lafe* is "applied to weapons, escaped persons, the seashore, etc."² G. 2145, *æðelinga helm*, 'the leader of the nobles'; G. 1608, *breosta hord*, 'life.' These are metaphorical expressions for very commonplace

¹ 4. 23.

² Gummere, p. 33.

ideas, and indicate the picturesqueness of the poetic speech in contrast to the unadorned prose. This is but one of the significant distinctions between prose and poetry. "The typical A. S. metaphor [of poetry] was originally confined to one word, or at the furthest, to several words that stood in the closest syntactical relation."¹ In this respect the prose differs somewhat, since it does not have that terseness of phrase which marks the poetry. Though the elaborated metaphor appears only in the form of the allegorical interpretation, where the metaphor can hardly be said to have an independent existence, there are many instances where the trope is expanded beyond the limits noted in the poetic metaphor. Sustained carrying on of a single figurative idea is rare; the author prefers to fall back on literal statement, often mixing the two up in a rather incongruous fashion, or to run into simile, or spring to another figurative idea in the form of a metaphor or a simile.

2. SIMILE.

The definition of Simile in the *Century Dictionary* is "the comparing or likening of two things having some strong point or points of resemblance, both of which are mentioned and the comparison directly stated; a poetic or imaginative comparison; also a verbal expression or embodiment of such a comparison."

So, probably, is suggested the following: 98. 31, hi lociað swa swa scealdu oððe smec. 112. 26, swa swa seo beo sceal losian, ðonne heo hwæt yrringa stingð, swa sceal ælce sawl forweorðan æfter ðam unrihtamede,—the idea is not found in the Latin of

the death of the bee, but the popular belief is suggested by the mere mention of the bee's sting. The Latin is—

Ubi grata mella fudit
Fugit et nimis tenaci
Ferit icta corda morsu (III vii.).

116. 17, se wlite ðæs lichoman is . . . swiðe anlic eorðan blost-mum,—corresponding closely to the Latin, *Formæ vero nitor ut rapidus est ut velox et vernalium florum mutabilitate fugacior* (III vii. 20). 132. 21, sume [souls] beorhtor . . . swa swa steorran, ælc be his gelarnunga. 134. 9, sum god . . . sie ðæt hehste, swa swa sum micel æwelm and deop and irnon manige brocas and riðan of,—the Latin' is much terser, *hoc veluti quidam omnium fons bonorum* (III x. 8). 154. 2, ðæt ealle gesceafta tofleowon swa swa wæter,—the Latin is, *et uno veluti vertice destituta sine rectore fluitabunt* (III xi. 108). 158. 24, he is ana staðolfæst wealdend and steora and steorroðor, forðæm he reht and ðæt eallum gesceaftum, swa swa god steora anum scipe,—so the Latin, *hic est veluti quidam clavus atque gubernaculum quo mundana machina stabilis . . . servatur* (III xii. 38). 172. 11, wisdom and eac oðre cræftas . . . liegað forsewene swa swa meox under feltune,—how vivid the simile renders the thought, expressed metaphorically in the Latin, *virtus . . . sceleratorum pedibus subjecta calcatur et in locum facinorum supplicio luit* (IV i. 15). 188. 2, hu ða godan scinað beorhtor ðonne sunne,—the Latin wants the simile, *qua probitas luce resplendeat* (IV iii. 2). 192. 26, he bið anlicost fettum swinum, ðe simle willnað liegan on fulum solum,—the Latin expresses it more briefly as a metaphor, *sordidæ suis voluptate detinetur* (IV iii. 63). 196. 31, se yfela willa bið tostenced swa se recels beforan fyre,—not in the Latin. 198. 8, ac swiðe oft se micla anweald ðara yfelena gehrist swiðe færllice, swa swa great beam on wyða wyrcð hludne dynt ðonne men læst wenað,—an expressive simile not in the original. 204. 1, and ða amarod on ðam heofonlicum fyre swa her bið sylfor,—the simile is not in the Latin. 210. 24, forhwi drefe ge

eowre mod mid unrihtre fionge, swa swa yða for winde ða sæ hrerað,—the only suggestion in the Latin is, *Quid tantos juvat excitare Motus* (IV iv. 1). 216. 28, buton he hæbbe swa scearp andget swa ðæt fyr,—corresponding to the metaphor of the Latin, *vivacissimo mentis igne* (IV vi. 10). 228. 11, se godcunda an-weald gefriðode his diorlingas under his fiðera sceade and hi scilde swa geornlice swa swa man deð ðone æpl on his eagan. Cf. *Ps.* xvii. 8.

The position of the Simile in A. S. Poetry is thus stated by Professor Gummere:¹ "The Simile . . . is very sparsely represented in A. S. Poetry. It is in opposition to the general tone, and requires a balance, a mastery of the subject, that is not to be looked for when, as in the best poems, the subject masters the singer. Well known exceptions to this rule are such passages as occur in Cynewulf's *Crist*, in the *Panther*, in the *Phoenix*, etc., and are all easily detected imitations of foreign models."

Referring to the presence of the Simile in Modern English, Professor Earle² says that "it is comparatively rare in prose; its proper field is Epic Poetry." Professor Gummere's investigations show how different, in this regard, the Epic Poetry of Anglo-Saxon is from that of Modern English; in the prose, we do not find such a difference. It is manifest from the above lists how much fewer the similes are than the metaphors. And when we consider, as Professor Earle further remarks, that "it is in the sermon perhaps more than in any other form of literature that we may find specimens of the figured diction, which is requisite to find the highest order of prose,"³ we realize how foreign must have been the Simile to the genius of the language.

There is something in the very nature of the Simile which would account for its comparative infrequency. To quote Professor Earle again:⁴ "Similes and pictured ideas are sought out for the sake of ornament, but Metaphor is a resource of expression that starts up instinctively by affinity with the process of sincere

¹*A. S. Met.*, p. 52.

²John Earle: *English Prose*; London, 1890, p. 235.

³*Ibid.*, p. 236.

meditation." There is a distinct consciousness of elaboration in the Simile, a worked out statement of figurative resemblances, which we do not find in the Metaphor. In a primitive literature such as the Anglo-Saxon, we should not, accordingly, expect the Simile to be so highly developed.

The Anglo-Saxons had not reached that stage in their development of prose where they could treat the Simile as a means of ornamentation. It was foreign to the language, and was adopted from the Christian literature, where it had been flourishing for centuries. The ornamentation which the Anglo-Saxons did employ was in the figures of euphony, which were familiar to them from immemorial use in their poetry. We shall see later how extensively they transferred these figures from poetry to prose. A rhetorical device is not likely to be elaborated unless it is part of the genius of the language; that which is borrowed will be used sparingly, and only those which are the special property of the language will lend themselves to elaboration. The lists from the prose but confirm the conclusions reached from the much scantier instances of the poetry, that the Simile is not a natural product of Anglo-Saxon soil, but is an importation from the fertile fields of the Ecclesiastical Latin.

The Simile is also of infrequent occurrence in the *Boethius*. Of the 27 instances quoted above, there are ten not suggested by the Latin, and these are all very good. The remainder more or less faithfully translate the text of the Latin, with the preservation of the figured idea, or they obtain the simile from the immediate context. Of the former there are eight, of the latter nine. The Anglo-Saxon may have a simile where the Latin has a metaphor, or it may expand to some length the idea contained in one word of its original.

It is interesting to note the sustained similes, as A. H. 614. 10, A. H. II 392. 21, W. H. 262. 5, B. H. 59. 28. Such a type is to be regarded as due to the influence of the allegorical interpretation, into which a simile or metaphor frequently merges.

What has been said of the sources of the ideas in the Metaphor applies with equal truth to the Simile. The Scriptures, the Fathers, and the common experiences of life furnished all the figurative needs of these writers. We do not meet with many

similes which arrest our attention by their originality; some of them are of considerable excellence and are not on the whole inferior to the metaphors, but the vital quality of the trope of poetry is always wanting. Anglo-Saxon prose is never great, its rhetorical devices never brilliant; its aim was to teach the people by means of the direct homily; its writers were earnest preachers, not men of great literary genius.

II. PHONETIC OR SOUND-FIGURES.

Under the head of Phonetic Figures, Gerber remarks¹ that there are three kinds. The first endeavours to embody in the name of an object a sound corresponding to its sense; the second kind disregards the meaning, considers the sound only, and arranges this sound in such an order that a musical effect is produced in speech; the third kind employs the sound only as a necessary means for definitely denoting an idea, and only so far as it produces a rhetorical effect. The general term for the first division is *Onomatopöie*, for the second, *Figures of Similarity in Sound and of Euphony*, and for the third, *Word-figures*. This treatment will deal only with the two latter groups.

1 *a.*—FIGURES OF SIMILARITY IN SOUND.

Of the various figures coming under this division, only *a. Homoioteleuton* and *β. Paromoion* are considered here.

a. Homoioteleuton.

The *Century Dictionary* defines *Homoioteleuton* as “a figure consisting in the use of a succession of words or clauses concluding with the same sounds.—*Note.* More comprehensive than rime, including rime, some other forms of assonance, and all other cases of similarity of termination in successive words, clauses, or lines.” In this treatment the figure will be limited to those cases where compound words in close syntactic relation end in the same sound, which includes the last member of the compound. Other cases will be considered under *Epiphora*.

In the Ælfrician and Blickling Homilies, the occurrence of Homoioteleuton is comparatively infrequent. The instances, moreover, can hardly be said to possess any real rhetorical value ; they seem to be conventional combinations, which readily recur to the preacher's mind. We are, however, conscious that, in such an example as B. H. 15. 2, cited above, there is an effort to attain rhetorical effectiveness ; but these examples constitute a meagre minority.

In several of the so-called Wulfstan Homilies, we realize a marked difference. Here we have no doubt of the oratorical purpose of the preacher in his use of the figure. He rises above the conventional limits of the figure and pours forth his thought in sentences marked by this recurring rime. It is a noticeable feature of those homilies in which he is strongly moved. It indicates, with the figures of Rime and Assonance, the value that these rhetorical devices must have possessed in the literary consciousness of the Anglo-Saxon, when used by such a master as Wulfstan.

β. *Paromoion.*

Paromoion is the reverse of Homoioteleuton ; it is the repetition of the initial syllable or syllables of words in the same sentence. The instances are very rare ; no examples have been noted in Ælfric, and very few in the Blickling Collection. Wulfstan alone justifies us in considering the figure.

a. Alliteration.

Alliteration is "the riming of the initial sounds of words or syllables," and in Anglo-Saxon verse "is employed to unite the two half-lines into the larger rhythmical unit of the complete line."¹ From its being a characteristic feature of poetry, it is not surprising that it should be found to a considerable extent in prose. Here, however, it must be treated with great caution, since cases of alliteration may occur in which there was no design on the part of the author; they may be merely fortuitous collocations of words with similar initial sounds.

If we consider the occurrences according to an arbitrary grouping of words in certain syntactical relations, we shall find that some combinations are more often marked by alliteration than others.

The examples under (a.), the Noun and its qualifying Adjective, which may be considered as intentional, are comparatively rare. The following would seem to indicate a conscious effort after this effect :

The rare instances that occur hardly justify the separate group of (c.), the Adjective and the dependent Noun; the following may, however, be noted as illustrative of the few conventional forms: W. H., 74. 12, *milde on mode*; 79. 7, *wide on worulde*; 145. 34, *wise on wordum*.

The group, (*d.*) Adjectives and Adverbs in close sequence, draws nearly all its instances from Wulfstan; the instances in Ælfric and B. H. being in some cases mere formulæ.

BOETH.

The instances of alliteration in Boethius are so infrequent that separate grouping is not called for. The most probably intentional instances are as follows: viii. 4, for *ðæm mihtlicum* and *manigfealdum weoruldbisgum*; 10. 17, *mid golde* and *mid gimme*; 40. 28, *welig on wæstmum*; 42. 30, *wlite* and *wela*; 48. 25, *behyd* . . . and *behelod*; 62. 4, on *bradum brede*; 102. 4, *weligne oððe wealdendne*; 114. 17, *monnum* and *magum*; 124. 17, *wist* and *wæda*; 140. 2, *stemn* and *staðol*; 140. 10, *wundorlic* and *winsum*; 144. 29, *friðstop* and . . . *frofer*; 148. 29, *friðað* and *fyrðrað*; 150. 13, *weaxað* and *eft waniað*; 156. 34, *manegum* and *mistlecum*; 158. 25, *reht* and *ræt*; 166. 13, *manega* and *mistlece bisna* and *bispell*; 180. 12, *lofes oððe leana*; 200. 3, *micelne wean* and *manigfealdne wete*,—transverse alliteration. 206. 23, *cystum* and *craeftum*; 208. 10, *yfelwillende* and *yfelwyrccende*; 218. 19, *manega* and *mistlice gemettunge*; 224. 11, *gehyt* and *gehelt*; 226. 22, *miscað* and *metgað*; 260. 1, *wyrhta* and *wealdend*.

Dr. O. Hoffmann¹ has made a study of the "rime-forms" in West-Germanic; he considers first, forms in which both members of the combination are related merely by a similarity of meaning, and second, in which both members are related by a similarity of sound, either initial or final. Though the investigation is made mostly in poetic monuments, attention is also given to the prose. The dialects considered are Old High German, Old Saxon, Frisian, and Anglo-Saxon.

Anglo-Saxon poetry, being alliterative, must greatly favour the production of "rime-forms," and, naturally, the proportion is

¹O. Hoffmann: *Reimformeln in West Germanischen*. Darmstadt, 1885. Diss.

much greater in poetry than in prose. Dr. Hoffmann¹ raises the question whether the presence of so many such forms in the prose, existing beside so many more in the poetry, can be taken as proof of a widespread use in popular speech. It is certain that a writer or speaker, acquainted with the classics of Beowulf, Cynewulf, and the "Cædmon" poems, must have a larger command of these forms than any illiterate person could have. At the same time, those prose works in which they occur most frequently—the Homilies—were addressed to the common people, and would most likely reflect many of the peculiarities of the common speech. We can hardly doubt that usual collocations of the written discourse, as 'clypode and cwæð,' 'dumbe and deaf,' 'sang and sægde,' etc., must have pervaded the colloquial speech as well. We realize the difference between the artistic and the popular use when we compare the figure of the genuine homilies of Wulfstan with the figure of the homilies of Ælfric. Ælfric's "rime-forms" seem to be in many cases popular formulæ and not the result of individual creation; Wulfstan, we clearly realize, is inventing new and startling forms to give impressiveness to his speech.

In the instances quoted above, the majority of the examples consist of words joined by conjunctions or closely related syntactically. The instances are infrequent where the author connects, like Lyly in his *Euphues*, several sentences by the bond of alliteration. The alliteration was confined to the chief words of the clause or simple sentence, and was, in prose, largely influenced by the frequent joining, in poetry, of alliterating words in the first half of the verse.

Wulfstan alone makes alliteration an artistic element. He realized its rhetorical effectiveness in the delivery of his message to the people, and used it abundantly in those homilies in which his fervour is greatest. Joining it, as he frequently does, with rime, he unites the metrical principles of the old and the new poetry, and, if he does not give us fine prose according to our recognized canons, he at least was the author of prose which must have stirred the minds of his hearers. We shall have to consider this prose further when we deal with *Rime*.

¹p. 30.

The fact that in neither A. H. nor B. H. is there any use made of alliteration above the ordinary level of the prose, confirms our opinion that it was a recognized property of popular speech. It is much the same as with the tropes. The tropes of the homilies are such as might readily occur in colloquial speech, allowance being made for a more finished form in the written discourse; these alliterative combinations are in such contrast to Wulfstan's and are generally of such a moderate nature that we can hardly deny that they are taken almost directly from the popular speech.

When we turn from the public addresses of the preachers to the literary labour of the translator, we realize the purpose of the figure. Alliteration is intended for the ear, not the eye; and, as the translation of the *Boethius* was not intended for oratorical delivery, the purpose of the figure would not here be served. Only such instances are found as are probably in common use. Thus 'wlite and wela,' 'wist and wæda,' 'reht and ræt,' etc., are among the most usual of the alliterative formulæ.

β. Rime.

Rime is very little used in Ælfric, and in the few instances of its occurrence it is doubtful whether it should be considered as an accident or as a rhyming combination not peculiar to any one writer. Such instances as 4. 32, *yfelnyss* and *ðwyrnys*, 38. 1, *herigendra* and *singendra*, etc., should, perhaps, be regarded as accidental.

The following examples may, however, be considered as more or less intentional :

44. 24, *forebeacena* and . . . *tacna*; 66. 9, *ætēs* and *wætēs*, so frequently; 138. 2, *hylt* and *gewylt*; 268. 12, *hwæðer he aht sy oððe naht*.

The following instances of Grammatical Rime¹ have been noted in Ælfric :

8. 27, *ealra hlaforda Hlaford*, *ealra cyninga Cyning*; 14. 23, *ban of minum banum* and *flæsc of minum flæsce*; 132. 23, *forligras*

Kluge¹ discusses the history of Rime in Germanic with special reference to Anglo-Saxon. The following forms are discriminated: *Athalhending*, as in 'wordhord'; *Skothending*, as in 'wægnðegn'; combinations like 'ceorl and eorl'; *Grammatical rime*, as in 'lað wið laðum'; *Sectional rime*, as in 'bord ord onfeng'; *Etymological rime*, as in 'dogora dægrim'; *Suffix rime*, as in 'ongan fremman'; and the rime, either *athalhending* or *skothending*, used to connect the two short lines of one long line, or the second short line of one long line with the first short line of the next.

The treatment is, of course, concerned mostly with the poetry, and is of value in this connection as showing the extent to which the device was used. From *Beowulf* to Layamon's *Brut*, there is a more or less steady increase in the use of rime,² an increase which cannot be merely the result of chance.

Sievers³ objects to Kluge's consideration of the suffixal rime as a special artistic form, because it is concerned merely with the similarity of syllables which in verse are unaccented. The objection is, to a certain extent, valid and applies to prose as well as to poetry. There are, nevertheless, instances of this rime quoted above which seem to possess a certain rhetorical value. Thus 'wordum and dædum' must have excited a certain amount of pleasure in the recurrence of the similar sound, even though that sound occurred in the unaccented syllables. The fact that we find further instances of three or more words joined together and all with the same unaccented suffix, would seem to justify us in assuming for the

¹ *P. B. B.*, ix. 422.

³ Paul's *Grundriss der Germ. Phil.*, II. 893.

² *loc. cit.*, p. 445.

suffixal rime a certain, though necessarily unimportant, place in the rhetorical economy of the prose structure. In rhetorical effect it cannot compare with rime in the accented syllables; yet it cannot be utterly disregarded.

The function of rime had not yet become established in poetry. It was at the time of Ælfric in the transitional stage on the way to its adoption as a definite device in poetic expression. During this period of its evolution it is but natural that it transgresses the limits of poetry and attempts liberties with the prose structure. Prose was yet far from having attained a perfect standard. It admitted many of the licenses which were the natural right of poetry. Alliteration, we saw, was found to a large extent in the prose of Wulfstan and to a lesser extent in that of Ælfric and the Blickling Homilist. This was a characteristic element in Anglo-Saxon verse; yet the unformed condition of the prose permitted its intrusion. The same is true with reference to rime, except that its presence in prose is less an appropriation of a strictly poetic device than is alliteration. Rime, as remarked above, was not fixed as a distinguishing feature of verse alone.

The above lists of assonance and rime—for all practical purposes they may be considered together—show to what a comparatively large extent these figures occur in the prose. There are instances of rime, as of alliteration, which are not included in these lists, because it was felt that they did not possess rhetorical value; they were merely the result of chance. These instances would be composed of those classes of rime which are in their nature unimportant, such as *Suffixal rime*, *Etymological rime*, *Grammatical rime*.

It is to be remarked that the feeling for rime as a characteristic of poetic quality is manifest in its use in prose. Except in cases where the riming forms have been frozen into formulæ, or where there is a suspicion of conscious art, rime, like its frequent concomitant, alliteration, occurs for the most part in passages above the average level of excellence. In other words, it here maintains its poetic quality. Wulfstan, who far surpasses the others in his use of all these phonetic figures, is a fine illustration of this fact. In his most impassioned utterances, he makes constant use of all these figures. The other homilists use it, some-

times to strengthen an antithesis, sometimes merely for the sake of the pleasing repetition of the sound; but they never attain to Wulfstan's vivid expression. The translation of the *Boethius*, not being addressed to the ear, contains very few examples, and these are mostly fossilized forms.

Kluge¹ calls attention to the riming forms in the *Charms* and the *Laws*. Such are: 'toslitan oððe tobitan,' 'unclæne ond un-mæne,' 'ræd ond dæd,' in the *Laws*; 'ne lond ne læsse,' 'ne fersc ne mersc,' 'ne ruh ne rum,' 'ne londes ne strondes,' etc., in the *Charms*. The formation of such rhymes is a characteristic of early speech, and they appear at an early date in chanted language, as in the *Charms*, or in language with the parallel structure in its simplest form, as in the *Laws*. As Kluge¹ says, these rhymes seem to have been very popular, since they appear frequently in the *Laws*; they are a feature also of the older period of the language, and not, as Jacob Grimm² says, restricted to the later. If less numerous, they are still on the same footing with the alliterative forms, as we may see from the *Charms*.³ The combination of Alliteration and Rime in the same words, or the presence of the two figures existing side by side, is very noticeable in Wulfstan.

2. WORD-FIGURES.

A Word-Figure is the repetition of words in a sentence to heighten the effectiveness of speech. The Figures coming under this general head are grouped according to the relation in form of the repeated words to one another, and according to the position of the repeated words in the sentence. These may be considered as

- A. Figures of Repetition with reference to the form of words.
- B. Figures of Repetition with reference to the position of words.

A. Rhetorical effect may be produced by the repetition of the same word-stem. If the difference in the words is effected by the case-endings or other inflections, the repetition is called *Polyptoton*, if by derivative forms, *Paregmenon*.⁴

Both these figures abound in the prose works that have been examined. Owing to the space which a list of all the examples

⁴ Gerber, II. 176.

would necessarily occupy, and the comparative unimportance of the figures in a study of style, I shall not include here the instances collected.

In rhetorical effect Polypotton is superior to Paregmenon. The reason is not far to seek. Except where one noun differs from another in such a detail as an insignificant prefix like *un*, *ge*, etc., the resemblance in sound and meaning is very often obscured by the derivative elements attached to the common stem, and prevents the pleasure, arising from the recognition of a preceding sound, from being realized. Polypotton, on the other hand, which is an identical repetition with a difference only in the unaccented inflectional ending, presents no hindrance to the recognition of the preceding sound.

In certain cases our authors use the figure with considerable effect. In the balanced and antithetical structure, attention is drawn by the repetition of a leading word to the main thought of the sentence. It is here that Paregmenon reaches its highest effectiveness, as when one word, being the negative of the other, is contrasted with it. 'Undeadlic,' for example, in A. H. i 224. 16, 'ðæt an lif is deadlic, ðæt oðer undeadlic,' brings out the idea to be conveyed more strongly than any other word could have done. So, by the repeated recurrence of a word, an idea is forced upon the minds of the audience—for these figures are most effective in spoken discourse,—as in A. H. i 238. 24, 'god hyrde wæs Petrus and god wæs Paulus and gode wæron ða apostolas.' In this sentence the position of the repeated word has also much to do with its emphasis. The position of the repeated word, indeed, enters as a factor into the rhetorical value of all these examples; the prominent part of the sentence—generally the first—giving importance to the word repeated in it. Those which are placed in no definite order are, for the most part, weaker than those which are repeated in the same relative position.

It is in Ælfric that these figures are used with best taste. His are not the vain repetitions of the Blickling Homilist; his repetitions are not mere substitutes for pronouns. Ælfric attained a higher degree of excellence in his prose style than any other Anglo-Saxon author; in all the word-figures he shows that he understood many of the possibilities of prose. He avoids the

poetic devices of Alliteration and Rime and adopts the legitimate prose expedient of Repetition. We shall see in the Figures which follow how careful he is, moreover, not to run into excess.

The abuses of repetition are obvious. A word or a phrase, repeated without any rhetorical justification, can only destroy the harmony of the sentence. The Blickling Homilies are most faulty in this respect. The author repeats words without, apparently, any thought to rhetorical effect. The repetition may often be the result of careless writing, as when a word is repeated which the author had forgotten he had already used. The repetition is also due to a desire on the part of the homilist to avoid all possible, or impossible, obscurities; a pronoun might often take the place of the repeated word with greater euphony and as perfect clearness.

In the few instances of these figures in the Biblical translations of the homilies, the original figure is preserved. In A. H. I 300. 8, 'ðu eart eorðe and ðu gewenst to eorðan. Ðu eart dust and ðu gewenst to duste,' there is an additional Polypotton added in the second part of the verse.

The collocation of the noun and its corresponding verbs, both syntactically and etymologically related, is not uncommon in these works, and, as we see from such examples like 'wyrhta wyrcð his weorc,' it can not be said to possess any great rhetorical value.

It is remarkable that nearly all the instances of Polypotton and Paregmenon in the *Boethius* are peculiar to the Anglo-Saxon. Those examples which are found both in the Latin and the Anglo-Saxon are as a rule better than the others. The Anglo-Saxon repeats words for the sake of clearness; the Latin is clear without this repetition. It is the difference between a youthful and a mature prose. The Anglo-Saxon version has, however, many good illustrations of the proper use of these figures. In strengthening his antitheses, the translator uses repetition with considerable skill. He can compare well with Ælfric.

B. The other figures of repetition are distinguished by their position in the sentence. They are classified as follows:¹ (1) the repetition of the same word in immediate sequence; (2) the repetition of the same expression in the significant parts of the sentence,

¹ Gerber, II. 180.

(a) at the beginning, (b) at the end, (c) at the beginning and end, (d) at the end of the preceding and beginning of the following sentence; (3) the repetition of the same words in inverse order; (4) the repetition of the same word in no special order.

1. THE REPETITION OF THE SAME WORD IN IMMEDIATE SEQUENCE.

The name of this repetition is *Epizeuxis*, which the *Century Dictionary* defines as "immediate or almost immediate repetition of a word involving added emphasis." The figure is so rare and of such weak rhetorical import that the several instances are not worth quoting. We might note, however, among others, A. H. I 336. 14, *yrnað, yrnað*, and *undoð ðæs mynstres geat*; 462. 8, *geswicað, earme, geswicað eowra offrunga*.

A. H. II 182. 8, *agif me minne sunu, agif me minne sunu*.

W. H. 72. 2, *ne latjað na, ne latjað, ac ofstlice efstað* and to Gode wendað.

B. H. 15. 18, *miltsa me, Dauides Sunu, miltsa me*. In the *Vulgate*, the versions of Matthew, Mark, and Luke do not repeat these words in immediate sequence. 87. 8, *ðu come to us, middan-geardes alysend, ðu come to us heofonwara hyht*.

2. THE REPETITION OF THE SAME EXPRESSION IN THE SIGNIFICANT PARTS OF THE SENTENCE.

a. At the Beginning.

This figure is called *Anaphora*, and is defined by the *Century Dictionary* as "consisting in the repetition of the same word or words at the beginning of two or more succeeding verses, clauses or sentences."

BOETH.

22. 17, *hu mihtest* ðu sittan on middum gemænum rice . . . *Hu mihtest* ðu beon on midre ðisse hwearfunga? The Latin has several clauses beginning with *quid si* in II ii. 40, which may have suggested this figure, but they do not correspond to the A. S. 50. 24, *for his cræftum* he beoð god if he god beoð, and *for his cræftum* he bið anwealdes weorðe gif he his weorðe bið; 132. 28, ðu *eart* sio birhtu ðæs soðan leohtes and ðu *eart* seo sefte ræst . . .; ðu *eart* ealra ðinga fruma . . .; ðu *eart* . . . weg; 198. 20, ic ne *sprece* nu no to dysegum monnum, ac *sprece* to ðam ðe wilniað; 208. 26, ðingiað ðæm ðe ðær man yflað and ne ðingiað ðam ðe yfel doð; 258. 1, *ne secð he nanwuh*t ne ne smeað, forðam ðe he hit wat eall; *ne secð he nanwuh*t forðæm he nan wuh't ne forleas; 258. 5, *simle he bið* gifende and ne wanað hys næfre nauht. *Simle bið* ælmihtig . . . *Simle he bið* lociende . . . *Simle he bið* gelice manðwære. *Simle he bið* ece . . . *Simle he bið* freoh.

These instances, which, it will be noticed, are not all pure Anaphora, comprise those which may be grouped under this figure. There are many cases in which the repetition occurs near the beginning of successive clauses or sentences, in the beginning of one clause and further on in the clause following, or in some other

position; these, with, however, some exceptions, I have not felt justified in considering as Anaphora. From the presence of these irregular repetitions, and the comparative infrequency of true Anaphora—for, when we consider the bulk of the works examined, the number of examples is not great—we are conscious that Anglo-Saxon prose writers did not greatly respect those conditions of position which would have made their repetitions more effective. The Anaphora of Ælfric and Wulfstan shows that these authors were not without an appreciation of the rhetorical value of this figure; in fact, there are many cases in which they made such use of it as to give real force to their thoughts. So they strengthened the Anaphora by the further rhetorical devices of inversion and transposition. When the repeated word is carried out of its usual order to the beginning of the sentence or clause, emphasis is given by this inversion, which is, of course, increased by the recurrence of the word in the corresponding position in the sentence or clause following.¹

The Blickling Homilist is in this respect also weaker than the others; he has not, on the whole, the vigour of Wulfstan nor the polish of Ælfric. At the same time, he does not fall into the excess which sometimes marks Wulfstan's work. The latter, for instance, in the passage beginning 69. 13, has twenty-four successive sentences all beginning with nearly the same words, and in several other places—57. 12, 114. 12, 230. 14, 265. 6—there are five or more clauses with the same beginning.

Seldom, however, as the examples of this figure are in the homiletic literature we have examined, they are much more infrequent and much less effective in *Boethius*. The oratorical

¹ That the Homilists knew the rhetorical virtue of a change from the normal order of words in the sentence, is manifest from the investigations made by Professor C. A. Smith in his dissertation, *The Order of Words in Anglo-Saxon Prose*, Baltimore, 1893. The third and fourth chapters deal with Inversion and Transposition in Alfred's *Orosius* and Ælfric's *Homilies*, and they show that Ælfric used these devices for rhetorical purposes to about the same extent as appears in the instances of Anaphora quoted above. Thus of 314 simple tenses taken from the *Homilies*, "155 are transposed, 139 follow normal order, while 20 show a mingling;" of the 186 compound tenses, "69 assume normal order, 53 show complete transposition, while 64 show a mingling of the two." (p. 26.)

occasion does not exist here; and, as was noticed in considering the other figures which appeal to the ear, such special devices are comparatively rare. It will be noticed that in only one instance is there any suggestion in the Latin which would account for the presence of the figure in the Anglo-Saxon. An independent examination of the Latin text of the *Boethius* will show, moreover, that the figure is here rather unusual and of no very great rhetorical significance; thus '*Nil periuria, nil nocet ipsis Fraus mendaci compta colore,*' is one of the few examples of the figure to be found in the First Book and rhetorically it is among the best. The real power of the figure we may learn from the following quotation from Cicero: '*nihilne te nocturnum præsidium Palatii, nihil urbis vigiliæ, nihil timor populi, nihil consensus bonorum omnium, nihil hic munitissimus habendi senatus locus, nihil horum ora vultusque moverunt.*'¹ To say that examples of such power are not found in Anglo-Saxon is but to say that Anglo-Saxon prose literature has not the strength of Cicero's orations—for figures are a measure of literary excellence; and this no one would venture to deny. That a certain vigorous use, however, is made of the figure—and in this the Anglo-Saxon of the homilies and even of this translation surpasses the Latin of the *Boethius*—is very evident from the examples quoted.

b. At the End.

This figure is called *Epiphora*, and is defined in the *Century Dictionary* as a "figure in which several successive clauses or sentences end with the same word or affirmation."

The end shares with the beginning the place of emphasis in the sentence; and Epiphora and Anaphora are the two figures which gain their force from the fact that the words are repeated in these respective positions. These figures are more frequent than the others of identical repetition and possess, on the whole, more rhetorical vigour. At the same time, we notice that the figure varies considerably—passing from the hardly more than grammatical repetition of such a sentence as B. H. 151. 17, ‘*ða wæs he gongende to ðære bære* and *ða on middan ðæm lichoman on ðære bære*, *ða wearð he gefæstnod be ðære swiðran hand to ðære bære*,’ which is clumsy and heavy, to the forcible repetitions of some of the other instances quoted above. The repetitions with little rhetorical value exist in greater proportion in the *Boethius* and the *Blickling Homilies*; in the Latin of the former the figure is very infrequently found. The *Blickling Homilist* does not seem to know the possibilities of the figure, for his repetitions betray a poverty of expression and rarely enforce his ideas. Wulfstan’s few examples are not especially strong, but, for the most part, they are more than merely grammatical. Ælfric, however, surpasses all the others in his treatment of the figure, and shows by his instances of Epiphora that he can command the language to serve his purposes. He makes use, it is true, of the grammatical figure, but he also attains fine effects with the rhetorical figure.

c. At the Beginning and End.

1. The figure of *Symploce*¹ combines Anaphora and Epiphora. The *Century Dictionary* defines it as “the repetition of one word at the beginning and another at the end of successive clauses.”

¹ Gerber, II, 193.

The examples are rare in Anglo-Saxon prose, and many of those included in the lists below do not strictly conform to the type.

277. 20, *ðæt æfre ænig ne wearð ær ðam eorðlic man wisra ðonne he wearð, ne ænig eorðlic cyning mærra and mihtigra ðonne he wearð*.

No examples have been found in the B. H. or *Boeth*. The quotations from A. H. and W. H. show how insignificant the figure is in A. S. prose. It hardly deserves separate treatment.

2. If the same word is repeated at the beginning and end of the same clause or sentence the figure is called *Cyclos*.¹ Another name for the figure is *Epanadiplosis*, which the *Century Dictionary* defines as "a figure by which a sentence begins and ends with the same word."

The name of this figure is *Anadiplosis*. It is defined in De Mille's *Rhetoric*¹ as “that figure by which the word at the end of one sentence or clause is repeated at the beginning of another.” Only the following instances from *Boethius* are worth noticing:

3. REPETITION OF THE SAME WORDS IN INVERSE ORDER.

“Rhetorical effect is attained if the same words, by external arrangement or by changed position, direct attention to the ideas which they represent.”² One of the figures under this head is *Antimetabole*, which the *Century Dictionary* defines as “a rhetorical

The special sentence structure underlying this figure gives it peculiar importance. The phrases or clauses are balanced in such a way that, were there no recurrence of the important words, emphasis would be given to the thought by the structure alone;

naturally, therefore, when to this is added the repetition of the leading words, the rhetorical force of the thought is further brought out, and the figure becomes one of the most telling in this category.

Gerber's¹ quotations very well illustrate the terseness and vigour of the figure in Latin literature; and in later literature it will be found to be equally effective, and used to as great an extent. Proverbs and epigrams are never more striking than when put in this form. Shakspeare's "Better a witty fool than a foolish wit" (*T. N.* i. v. 39) and Christ's "The sabbath was made for man, and not man for the sabbath" (*Mark* ii. 27) illustrate the terseness and pithiness this figure gives in the expression of thought.

The figure, it will be noticed, occurs in A. H. only less frequently than Anaphora and Epiphora, but in W. H. it is rare and in B. H. does not exist. That it is rarely if ever found in the poetry may with tolerable safety be inferred from its not appearing once in *Beowulf*. The figures of repetition are all comparatively rare in the poetry, for, though the thought is frequently repeated, it is generally expressed in different words. From the formidable list of kennings collected by Dr. Bode and the other numerous synonyms existing in the poetic vocabulary, we gain some idea of the abundant means there were to avoid repetition of words. This figure with the others was, therefore, distinctly a devise of prose; that it was so sparingly used in the homilies would seem to indicate that it was not native but due to foreign influence, to which Ælfric, who has the greatest number of examples, was probably most susceptible.

CONCLUSION.

Broadly considered, there is nothing peculiarly distinctive in the tropes of Anglo-Saxon prose to give a special significance to this literature. So much is borrowed, either directly or indirectly, from foreign sources that the essentially native idea can hardly be distinguished from the foreign. The literature of

¹ II 212 f.

the learned classes, to which the homilists belonged, consisted of the *Vulgate* and the *Church Fathers*. These contained practically all the metaphorical ideas that we find in A. S. prose; those which seem most likely native are not of such a distinctly national character as to preclude their existence in another literature and their being borrowed, and adapted to the A. S. audience. Generally, the author emphasizes a trope which especially strikes off A. S. conditions and thus indicates the aptness of the idea, if not its originality.

The tropes are simple in their conception, and are used as they occur to the mind of the preacher. There is no studied or dramatic display, no climactic closing of a sentence with a metaphor, which writers of the eighteenth and nineteenth centuries have used with such fine effect; this can come only with a high degree of literary culture. The close of many of Burke's paragraphs are metaphors which sum up all that precedes in one forceful and comprehensive idea. This the A. S. metaphor never did.

Professor Earle remarks that "prose gets its inspiration from poetry—assimilates the characteristics of poetry." It is manifest from a comparison of the metaphors quoted above with those collected by Professor Gummere that the metaphors of prose and poetry are quite distinct. The metaphor of the poetry is in harmony with the spirit of the poetry; it is bold, picturesque, essentially Germanic. The metaphor of the prose, like the content of the prose, is borrowed, and, for the most part, has not been recast into such a mould as to have the virtue of even transformed thought. It has not been inspired by the metaphor of the poetry. In fact, we can hardly speak of the prose of the homilies as national at all; the temper of the Anglo-Saxon, as declared in even the essentially Christian poems, is almost absent from the prose. Wulfstan most nearly approaches it. Prose had not yet become the natural vehicle of expression for the most vital thoughts and feelings of the people; the men who wrote it were steeped in a foreign literature, their intellectual sympathies were ecclesiastical and Latin, not Germanic.

When we pass from tropes to figures, we enter upon conditions quite different from those hitherto considered. Tropes depend

upon their content, figures upon their form to produce the intended rhetorical pleasure. In the former case the thought is strengthened by something external, a comparison expressed or implied, in the latter by the form or position of the words in which the thought is stated. Moreover, we find that the relations between prose and poetry are closer in the case of most of the figures. Poetry had practically no influence in creating the prose tropes, but many of the figures come directly from poetry, are the exclusive property of poetry. The figures of euphony, since they depend on the recurrence of sound to produce a rhythmical effect, are making use of a device which it is intended that only verse shall employ. Alliteration, the distinguishing feature of A. S. verse, rime, which was beginning to establish itself as the distinctive element of English poetic form, and assonance, which is closely related to rime, were all borrowed directly from the verse. The rhythm of prose was not understood by the A. S. writer; it is too subtle to be matched by the use of certain rhythmical devices of poetry. Hence Wulfstan writes prose which more resembles poetry, while Ælfrie comes nearer the true prose rhythm by avoiding these extraneous devices. That there is more passion, intenser fervour in Wulfstan than in Ælfrie is manifest, and these poetic figures are used to express it. Because prose had not reached its full development and had not come into the inheritance of later ages, Wulfstan resorted to expedients more familiar and of acknowledged propriety in verse to convey his passion. Wulfstan's style may be vigorous in these sermons, but it is not pure prose; it has that fault which corresponds to the scanned sentences of some pseudo-oratorical productions of the present day—though the comparison is unfair to Wulfstan.

On the other hand, the word-figures, which in A. S. literature are more frequent in prose than in poetry, are used by Ælfrie more abundantly and with greater skill than by any of the other writers considered. The grammatical figures which mar much of the prose of B. H., he avoids to a considerable degree; the most important figures of this kind serve to express his thoughts with clearness and vigour. As in the other figures which are not exclusively poetic, Ælfrie rises superior to the Blickling Homilist, Wulfstan, and the translator of *Boethius*, and further establishes his place as the best of the A. S. prose writers.
